

Plastic pollution is one of the world's most intractable challenges. It is, also, an untapped innovation and investment opportunity.

Think Beyond Plastic, in collaboration with leading academic and research institutions, thought leaders, industry and investors is leading a multi-disciplinary effort to accelerate commercialization of research and innovation with focus on plastic pollution.

Think Beyond Plastic's Innovation Center is a hub bringing together innovators, entrepreneurs, industry, scientists, engineers and consumer advocates. It provides to qualified innovators and entrepreneurs access to research on chemicals, polymers and toxicity, state-of-the-art material innovation equipment, guidance by industry and science, and collaborative exploration by interdisciplinary teams representing science, industry and consumer advocacy. Innovators can test commercial scalability, toxicity, biodegradability, compostability and design.

The International Sustainable Chemistry Collaborative Center (ISC<sub>3</sub>) is a new globally acting collaboration center, that connects experts from industry and science with stakeholders from civil society and the public sector to enable innovation on all levels of chemical production and use. Acting as an innovation and dialogue platform, a think tank and an education hub the ISC<sub>3</sub> supports the global breakthrough of Sustainable Chemistry.

At ACHEMA, the ISC<sub>3</sub> showcases innovations in Sustainable Chemistry in cooperation with Think Beyond Plastic™, an innovation accelerator that advances commercialization of research and innovation for circular materials, circular design, green chemistry and innovative packaging design. Think Beyond Plastic™ has been advancing a global, multi-disciplinary effort to accelerate the pace of innovation and to support commercialization of bio-benign materials, associated manufacturing and innovative packaging design utilizing these new materials. Together with Think Beyond Plastic™ the ISC<sub>3</sub> presents five examples of Sustainable Chemistry innovation for the new plastics economy.
